# Vulkanised 2025

Looking for a cross platform and multiple OS solution

.NET 8.0

Windows

OS	Versions	Architectures	Lifecycle
 Nano Server	2022, 2019	x64	<a href="#">Lifecycle</a>
Windows	11 24H2 (IoT), 11 24H2 (E), 11 24H2, 11 23H2, 11 22H2 (E), 10 22H2, 10 21H2 (E), 10 21H2 (IoT), 10 1809 (E), 10 1607 (E)	Arm64, x64, x86	<a href="#">Lifecycle</a>
Windows Server	23H2, 2022, 2019, 2016, 2012-R2, 2012	x64, x86	<a href="#">Lifecycle</a>
Windows Server Core	2022, 2019, 2016, 2012-R2, 2012	x64, x86	<a href="#">Lifecycle</a>

Linux

OS	Versions	Architectures	Lifecycle
 <a href="#">Alpine</a>	3.20, 3.19, 3.18	Arm32, Arm64, x64	<a href="#">Lifecycle</a>
<a href="#">CentOS Stream</a>	9	Arm64, ppc64le, s390x, x64	<a href="#">Lifecycle</a>
<a href="#">Debian</a>	12	Arm32, Arm64, x64	<a href="#">Lifecycle</a>
<a href="#">Fedora</a>	40	Arm32, Arm64, x64	<a href="#">Lifecycle</a>
<a href="#">openSUSE Leap</a>	15.6, 15.5	Arm64, x64	<a href="#">Lifecycle</a>
<a href="#">Red Hat Enterprise Linux</a>	9, 8	Arm64, ppc64le, s390x, x64	<a href="#">Lifecycle</a>
<a href="#">SUSE Enterprise Linux</a>	15.6, 15.5	Arm64, x64	<a href="#">Lifecycle</a>
<a href="#">Ubuntu</a>	24.10, 24.04, 22.04, 20.04	Arm32, Arm64, x64	<a href="#">Lifecycle</a>

Android

OS	Versions	Architectures	Lifecycle
 <a href="#">Android</a>	15, 14, 13, 12.1, 12	Arm32, Arm64, x64	<a href="#">Lifecycle</a>

# Vulkanised 2025

## Video Decoders

Video Decoders used before Vulkan, other ones to note are VAAPI and VDPAU

SDK	LINUX	WINDOWS	H264	HEVC
NVIDIA Video SDK	X	X	X	X
Intel Media SDK (Legacy)	X	X	X	X
Intel One API - OneVPL	X	X	X	X
Microsoft Media Foundation		X	X	X
Direct Show		X	X	
DXVA		X	X	
Vulkan SDK	X	X	X	X

Graphics API used with .NET before Vulkan

- OpenGL

Decoders	SPS	PPS
DXVA	Required	Required
VAAPI	Required	Required
VDPAU	Required	Required
VULKAN	Required	Required

# Vulkanised 2025

Silk.NET takes the released Khronos specifications and generates the C# code required to use the Vulkan API as well as other technologies:

- Compute
- Graphics
- Video

## Supported Technologies

## Supported Targets

<https://dotnet.github.io/Silk.NET/>

# Vulkanised 2025

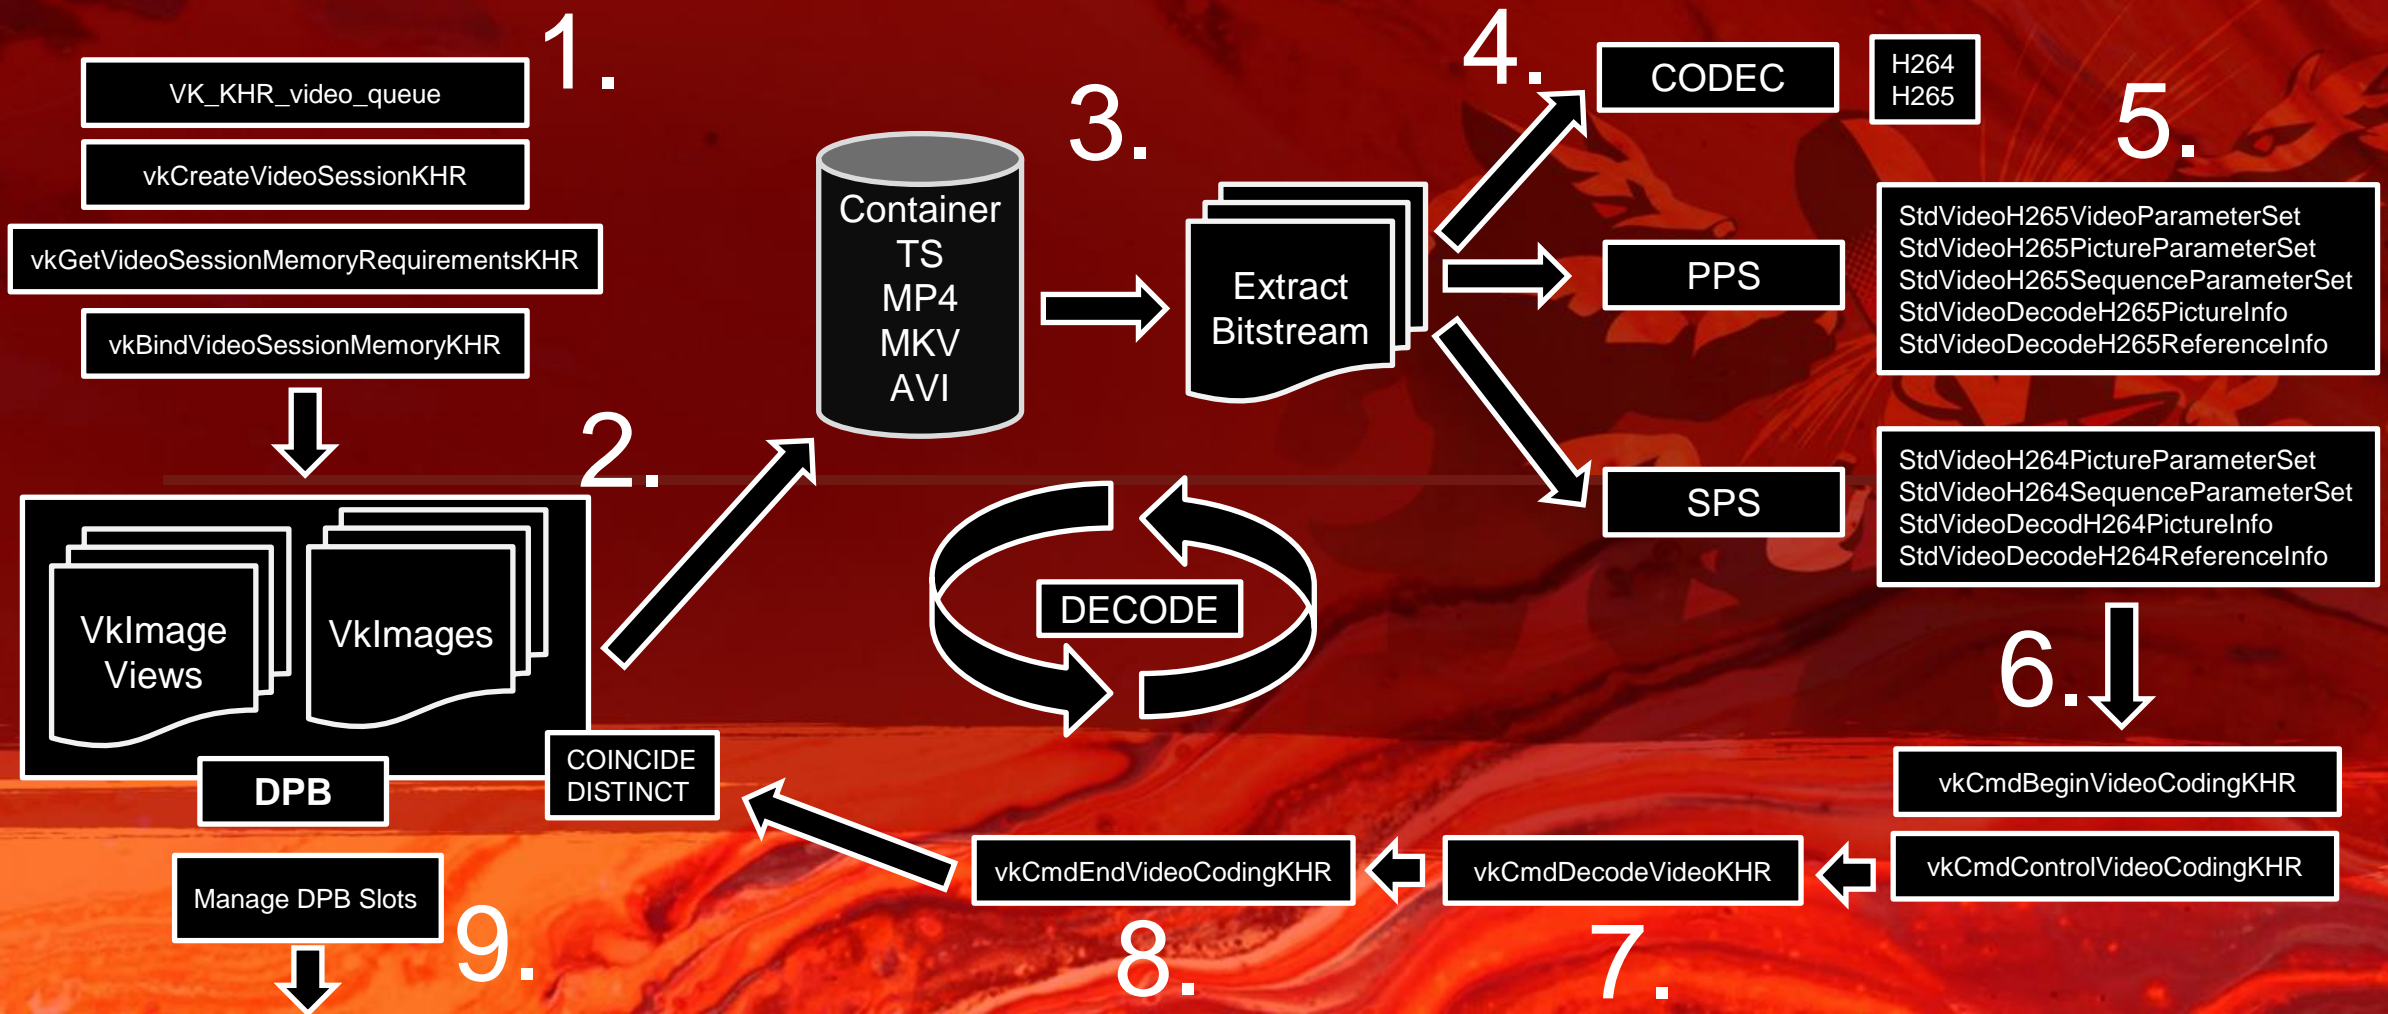

## Getting Started with Video Decoding

- First Step extract video codec(H264, HEVC) from a video container:
  - TS
  - MP4
  - MKV
  - AVI
- Next need to fill the following Vulkan structures depending on Codec

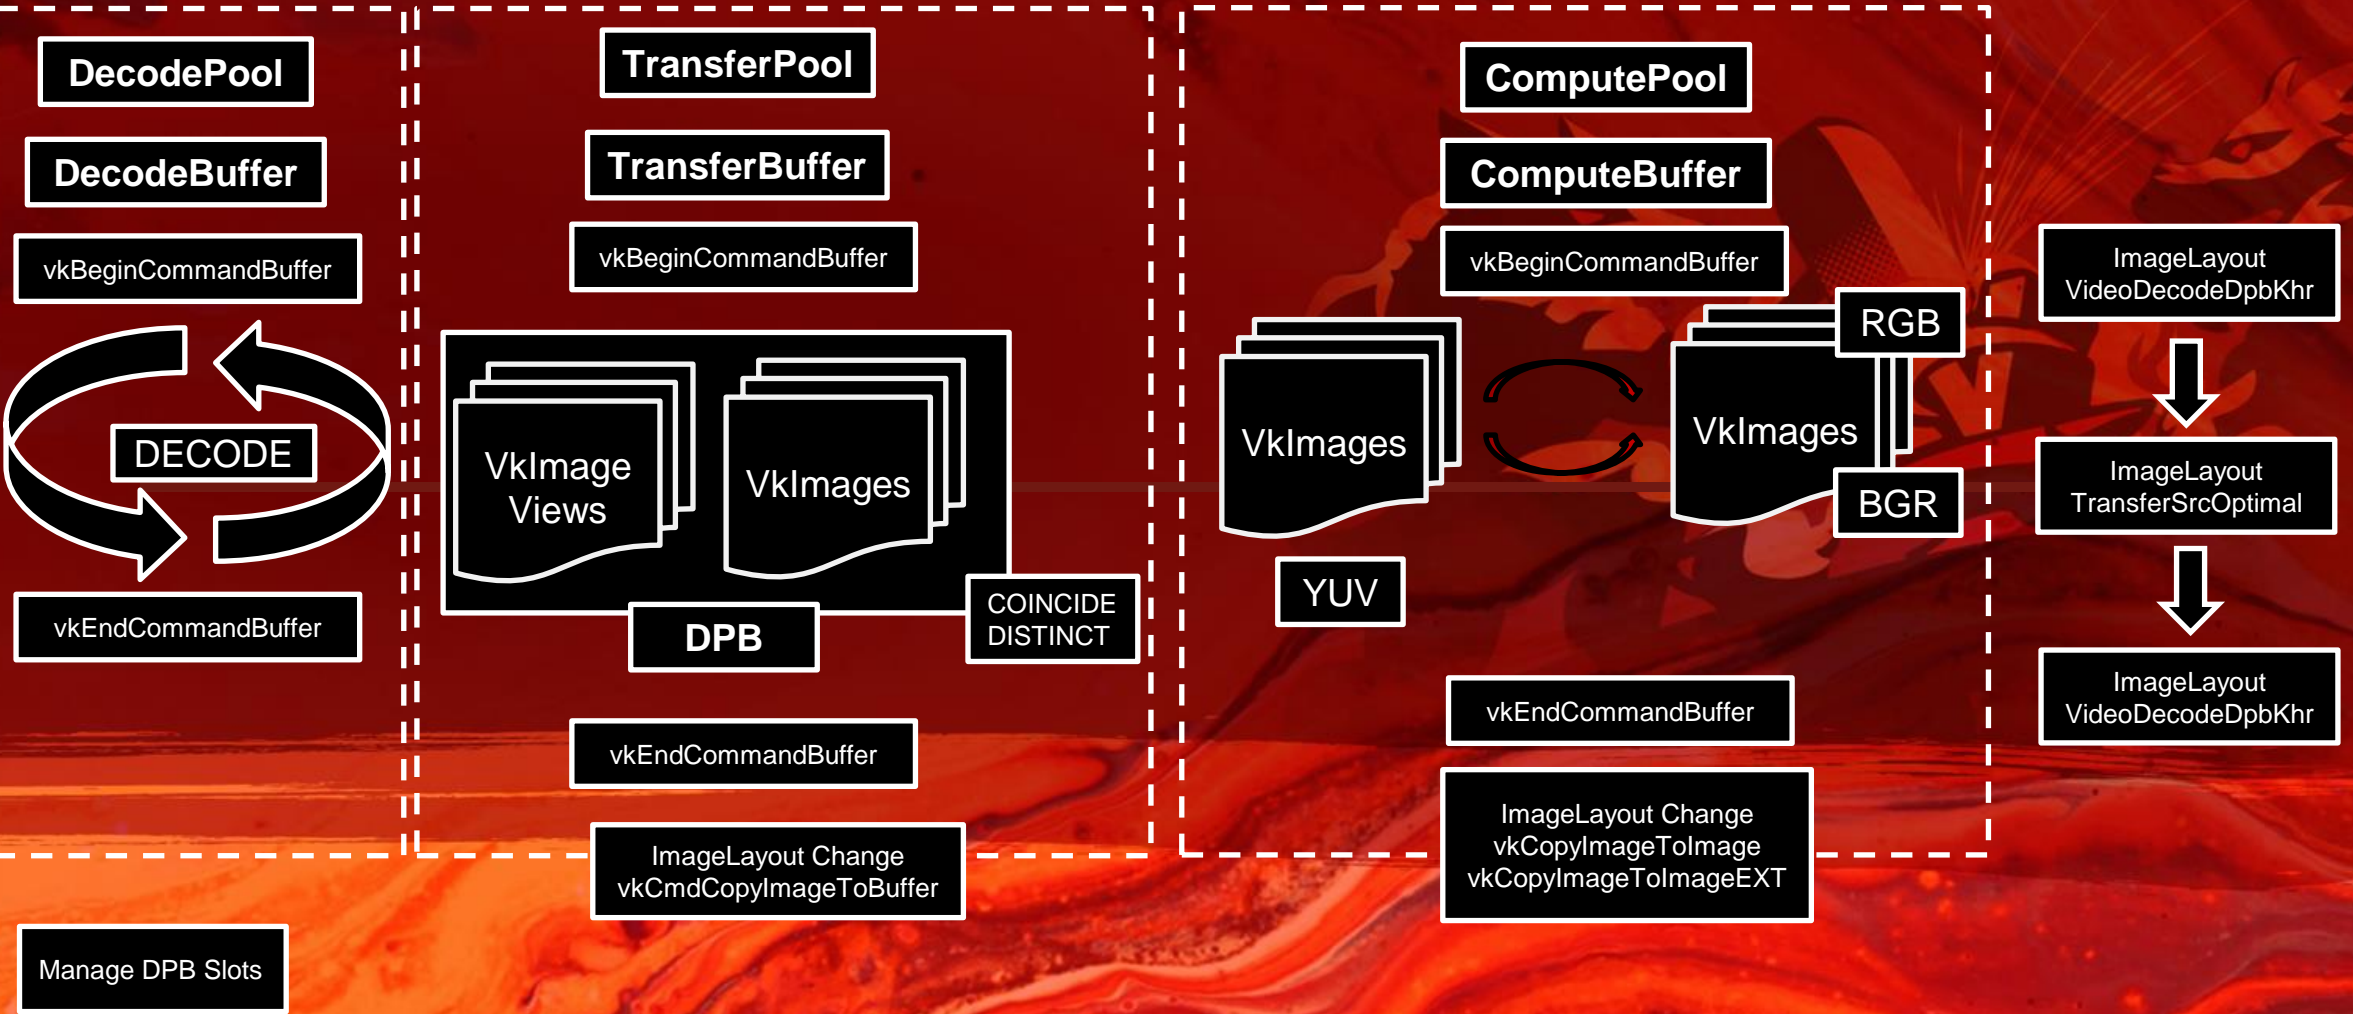

# Vulkanised 2025

## Getting Started with Video Decoding

# Vulkanised 2025

## Submitting all queued work

# Vulkanised 2025

## Decoded Picture Buffer

After each Image that was decoded the ImageLayout will be changed and then need to set ImageLayout back to VideoDecodeDpbKhr to be used in next frame decoding

In the `VkGetPhysicalDeviceVideoCapabilitiesKHR` call this will determine if the same image can be used for DPB and decoder output

- `VkVideoDecodeCapabilityFlagBitsKHR`
- `DPB_AND_OUTPUT_DISTINCT_BIT_KHR`
  - INTEL
  - AMD
- `DPB_AND_OUTPUT_COINCIDE_BIT_KHR`
  - NVIDIA

# Vulkanised 2025

## Required Avalonia Packages

```
<Project Sdk="Microsoft.NET.Sdk">
  <PropertyGroup>
    <OutputType>WinExe</OutputType>
    <TargetFramework>net8.0</TargetFramework>
    <Nullable>enable</Nullable>
    <BuiltInComInteropSupport>true</BuiltInComInteropSupport>
    <ApplicationManifest>app.manifest</ApplicationManifest>
    <AvaloniaUseCompiledBindingsByDefault>true</AvaloniaUseCompiledBindingsByDefault>
    <AllowUnsafeBlocks>true</AllowUnsafeBlocks>
  </PropertyGroup>

  <ItemGroup>
    <Folder Include="Models\" />
    <AvaloniaResource Include="Assets\*" />
  </ItemGroup>

  <ItemGroup>
    <PackageReference Include="System.Reactive" Version="5.0.0" />
    <PackageReference Include="Avalonia" Version="11.2.1" />
    <PackageReference Include="Avalonia.Desktop" Version="11.2.1" />
    <PackageReference Include="Avalonia.Themes.Fluent" Version="11.2.1" />
    <PackageReference Include="Avalonia.Fonts.Inter" Version="11.2.1" />
    <!--Condition below is needed to remove Avalonia.Diagnostics package from build output in Release configuration.-->
    <PackageReference Include="Avalonia.Diagnostics" Version="11.2.1">
      <IncludeAssets Condition="'$(Configuration)' != 'Debug'">None</IncludeAssets>
      <PrivateAssets Condition="'$(Configuration)' != 'Debug'">All</PrivateAssets>
    </PackageReference>
    <PackageReference Include="CommunityToolkit.Mvvm" Version="8.2.1" />
  </ItemGroup>
```

# Vulkanised 2025

## Required Silk.NET Packages(WritableBitmap, ExternalMemory)

- Silk.NET.Vulkan
- Silk.NET.Vulkan.Extensions.EXT
- Silk.NET.Vulkan.Extensions.KHR
- Silk.NET.Core

## Optional Silk.NET Packages(Windowing)

- Silk.NET.Glfw
- Silk.NET.Windowing

# Vulkanised 2025

Setting up Avalonia application  
there are essentially 3 different  
ways to use Vulkan:

- WritableBitmap
- Windowing
- ExternalMemory

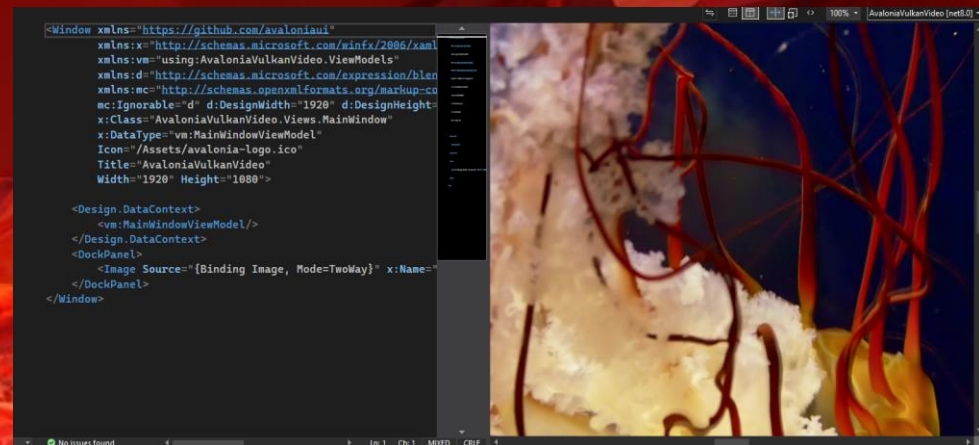

# Vulkanised 2025

## WritableBitmap

```
[ObservableProperty] private WriteableBitmap _image;
0 references | 0 changes | 0 authors, 0 changes
private unsafe void UpdateVideo(nint vkBufferPtr, int width, int height)
{
    using (var buffer = Image.Lock())
    {
        var size = width * height * 4;
        System.Buffer.MemoryCopy((void*)vkBufferPtr, buffer.Address.ToPointer(), size, size);
    }
    OnPropertyChanged(nameof(Image));
}
```

# Vulkanised 2025

## Windowing with GLFW

Use GLFW to manage the windowing system on the platform

```
Silk.NET.GLFW.Glfw glfwApi = Silk.NET.GLFW.Glfw.GetApi();  
WindowHandle* glfwWinHandle = glfwApi.CreateWindow(1920, 1080, $"GlfwWindow", null, null);  
var glfwWin = new GlfwNativeWindow(glfwApi, glfwWinHandle);
```

## Parenting

- Windows
  - `User32.SetParent(glfwWin.Win32.Value.Hwnd, IPlatformHandle.Handle)`
- Linux
  - `Xlib.XReparentWindow(display, glfwWin.X11.Value.Window, IPlatformHandle.Handle)`

`Avalonia.Platform.IPlatformHandle` represents the native platform control handle that represents the parent of the GLFW Window

# Vulkanised 2025

## ExternalMemory

Configuring the compositor and drawing surface to support external memory that can be used for a creating VkImage

```
namespace AvaloniaVulkanVideo
{
    0 references | AndrewPBennett, 1 day ago | 1 author, 1 change
    internal sealed class Program
    {
        // Initialization code. Don't use any Avalonia, third-party APIs or any
        // SynchronizationContext-reliant code before AppMain is called: things aren't initialized
        // yet and stuff might break.
        [STAThread]
        0 references | AndrewPBennett, 1 day ago | 1 author, 1 change
        public static void Main(string[] args) => BuildAvaloniaApp()
            .StartWithClassicDesktopLifetime(args);

        1 reference | AndrewPBennett, 1 day ago | 1 author, 1 change
        public static AppBuilder BuildAvaloniaApp() =>
        AppBuilder.Configure<App>()
            .UsePlatformDetect()
            .WithInterFont()
            .With(new Win32PlatformOptions
            {
                RenderingMode = new[]
                {
                    Win32RenderingMode.Vulkan
                }
            })
            .With(new X11PlatformOptions()
            {
                RenderingMode = new[]
                {
                    X11RenderingMode.Vulkan
                }
            })
            .With(new VulkanOptions()
            {
                VulkanInstanceCreationOptions = new VulkanInstanceCreationOptions()
                {
                    UseDebug = true
                }
            })
            .LogToTrace(LogEventLevel.Debug, "Vulkan");
    }
}
```

# Vulkanised 2025

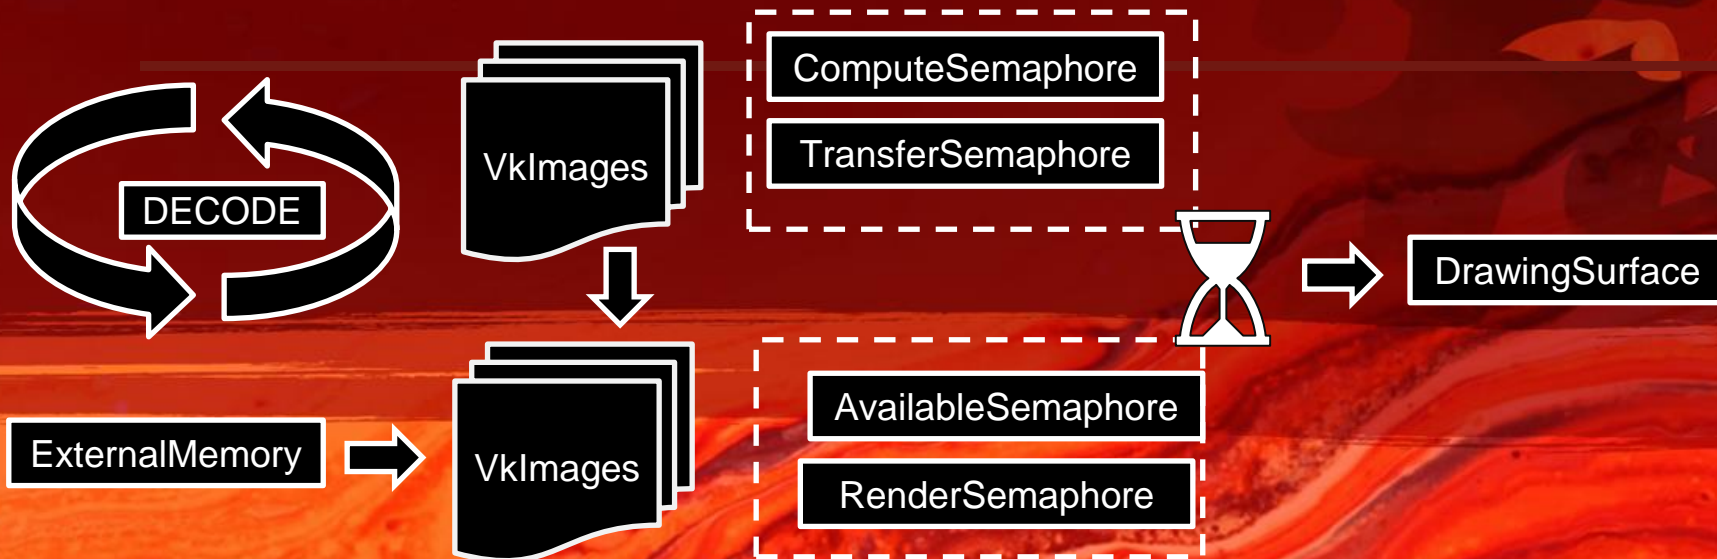

## ExternalMemory

Configuring the compositor and drawing surface to support external memory that can be used for a creating VkImage

VkExternalMemoryImageCreateInfoKHR-HandleTypes

- VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_FD\_BIT
- VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_BIT

VkImageCreateInfo

# Vulkanised 2025

## Final Result

Video Files used for testing:

- <https://test-videos.co.uk/>

# Vulkanised 2025

## Lessons learned and challenges

- Tools for analyzing without a rendering surface are limited
  - RenderDoc and Nsight are great tools but need a graphics pipeline to use
  - Not possible to debug Vulkan Decoders or Encoders without graphics pipeline, if developing standalone software implementations
- Validation Layers helped immensely when implementing
- Decoded Picture Buffer is challenging to implement and requires a lot of different standards
- Video Capabilities vary from hardware to hardware changing the way the DPB and Decoded output is managed

 Vulkanised 2025
